KRAVII

# An AI agent that runs a wallet, and cannot lose your money

**TEAM KRAVII · FINTECHATHON 2026 · TOPIC F**

formerly Agentic Wallet

# The problem

01

**STAGED PAYMENTS**

rely on trust

02

**AI AGENTS**

can be fooled

03

**PROMPT RULES**

break

**How can an agent act when its rules must survive manipulation?**

THREE LAYERS OF AUTHORITY

# User owns · agent holds a key · contract decides

**USER** owns

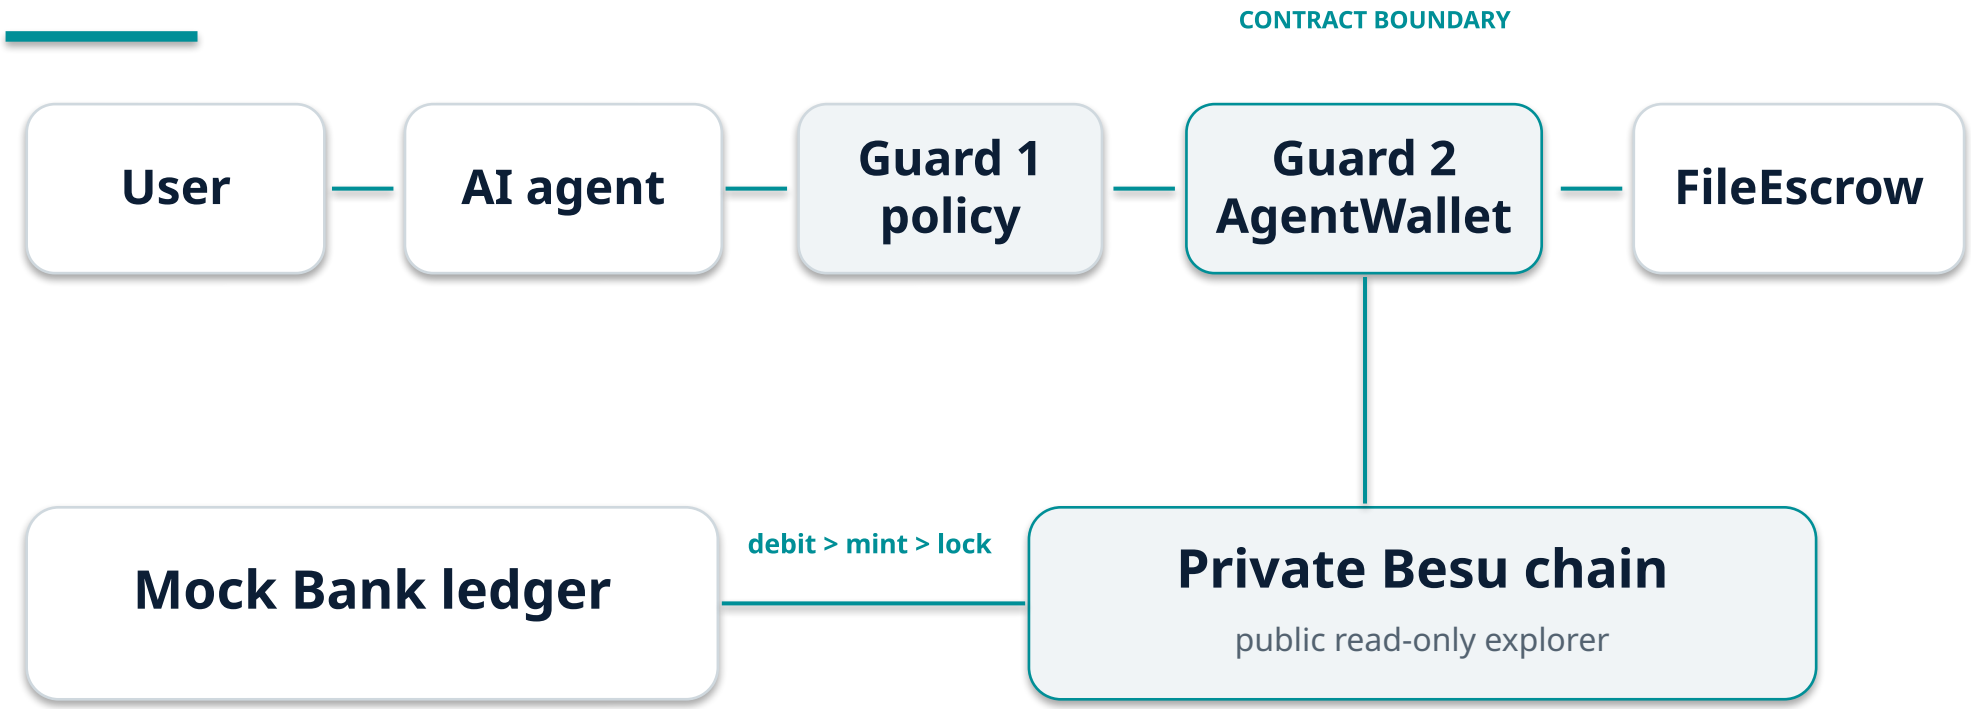

**AGENT** session key

**CONTRACT** decides

## ACTION TIERS

| | |
|---|---|
| 0 | Read |
| 1 | Propose |
| 2 | Auto within caps |
| 3 | Emergency pause |

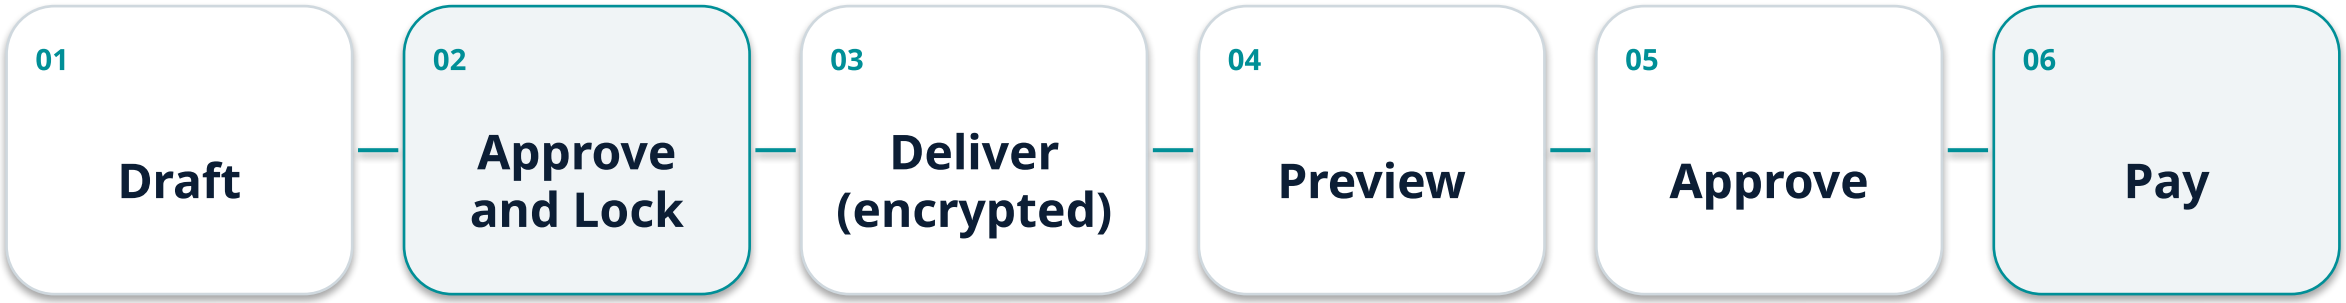

# Architecture

When the escrow pays out, the seller's bank is credited. Only the app can write to the chain; anyone can read it.

A SIX-STEP FAIR EXCHANGE

# A deal, step by step

## No money moves before Approve and Lock.

The delivered file is encrypted and its hash is recorded on chain; the key is released only after approval.

AN ON-CHAIN REFUSAL

# Proof: the guard refuses the agent's own key

TERMINAL

```
cast receipt
0x7f47a0c1...011f3191
```

agentTransfer to a stranger reverted:

**RecipientNotAllowed**

THE PRODUCT BEYOND THE CONTRACT

# Built around the core

01 **Desktop app Windows, macOS, 0.6.3**

02 **Company accounts and group votes**

03 **KYC PromptPay / card top-ups (test)**

04 **Split payment**

05 **Public job links**

06 **Multi-model neutral arbiter**

# How we tested it

**115** contract tests

**15** web security tests

**22** step smoke test

FOUND

- **High — refund paid twice**
- **High — non-signer could spend company money**
- **Silent arbiter locks funds → 7-day timeout**

Fixes in review (pull request awaiting merge)

WHAT THE DEMO DOES NOT CLAIM

# Known risks, next steps

| RISK | NEXT |
| --- | --- |
| Keys held by server (demo) | Device keys |
| One validator | Multi-validator |
| Disputes off | Code signing |
| Unsigned desktop builds | |

# The agent proposes, the user approves, the contract enforces.
